1. Purpose

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.

## 2. Scope

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.

### Inspection Acceptance Table

| Parameter        | Requirement       | Result |
|------------------|-------------------|--------|
| Pressure         | 10 bar            | PASS   |
| Temperature      | 80 C              | PASS   |
| Visual condition | No visible damage | PASS   |
| Documentation    | Current revision  | PASS   |

|                                                        |                                 |                            |                           |                               |
|--------------------------------------------------------|---------------------------------|----------------------------|---------------------------|-------------------------------|

| <b>Quality Assurance and Quality Control Procedure</b> |                                 |                            |                           |                               |
| <div>COSO</div>                                        |                                 |                            |                           |                               |

3. Quality Requirements

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.
