DOCUMENT CONTROL AND PURPOSE

This procedure defines the requirements for controlled inspection, verification, recording, and reporting of the applicable engineering activity.

1. Purpose

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.

Critical benchmark note: maintenance interval shall be verified.

## 2. Scope

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.

### Inspection Acceptance Table

| Parameter                                                        | Requirement       | Result |
|------------------------------------------------------------------|-------------------|--------|
| Critical benchmark note: maintenance interval shall be verified. |                   |        |
| Pressure                                                         | 10 bar            | PASS   |
| Temperature                                                      | 80 C              | PASS   |
| Visual condition                                                 | No visible damage | PASS   |
| Documentation                                                    | Current revision  | PASS   |

|                                                     |                                 |                            |                           |                               |                 |

| <b>Electrical Installation Inspection Procedure</b> |                                 |                            |                           |                               |                 |

3. Electrical Requirements

All inspection activities shall be performed using approved instruments and documented against the current revision of the applicable procedure.

Inspection personnel shall verify identification, condition, measurements, documentation, and acceptance criteria before releasing the item.

Any deviation from the specified requirement shall be recorded as a finding and reviewed according to the applicable quality process.
